

Nov 18, 2024 | CSC301 Backend Team Meeting

Attendees:

Katarina, Victor, Mark

Questions:

- ☐ Do we need to do something on the backend for subtopics?

Notes:

- Discussed how to add a CRON job to seed UAT database (not production database) every day.
- Created branch:
<https://github.com/csc301-2024-f/project-17-computational-bio-lab-ccbr/tree/33-cron-job-to-update-data-without-having-to-run-data-updates-manually?tab=readme-ov-file>
- Had to modify environment variables to give write access for the job.
- Modified migrateDataScript.ts code to pull today's date to use for querying.
- Created CRON job and scheduled it daily.

Action items:

- ☐ Victor: make sure CRON job is scheduled at a specific time.
- ☐ Katarina: ask Jeff about subtopical searching. Should we create something in the backend to determine subtopics?
- ☐ Backend team: if time, look into deleting from the database (add one day and delete one day).
